

TWO WAY STREET

Sufficient random width strips of fabric at least 20" long to make a panel 12 – 13" wide by 20+" long when seamed together.

Sew strips together into a panel that is 20"+ long. Measure the width of the panel, which should be 12 – 13". Using this measurement for the other dimension, cut the centre square segment from the panel. Cut two side segments from the leftovers of the panel, each 3 ½" wide. Turn the square ¼ turn, turn one side panel upside down and sew together as pictured. Layer, quilt, add label and bind.
